Is data always in the right place?
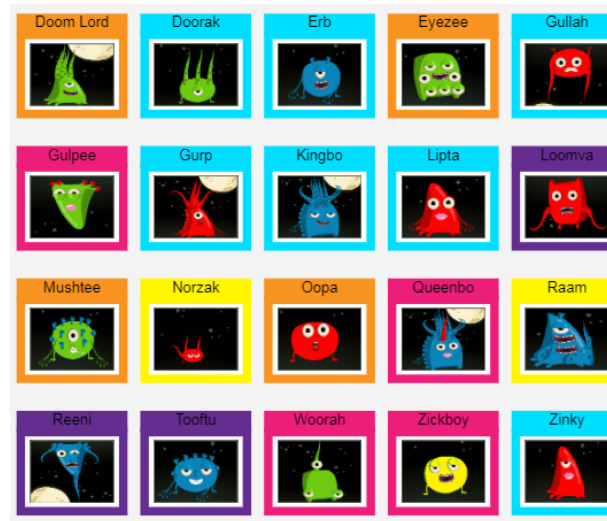

Word	Definition
Database	**A computerised system that makes it easy to find and store information**
Criteria	**Specific information to decide something**
Group	**To put information into specific groups**
Arrange	**To reorder information into a clearer format**
Collaborative	**Produced by, or involving, two or more parties working together**

What criteria could you use to sort or group these aliens?

Here are some useful buttons that you will use during this unit.
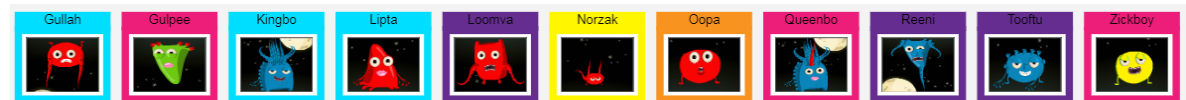

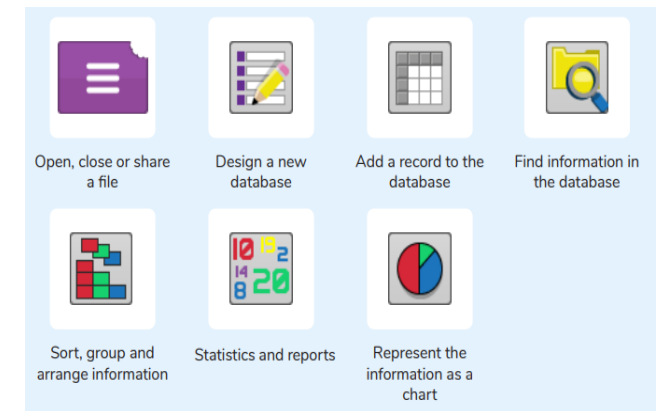

If you have played the game "Guess Who?", you are choosing specific data to group and sort the characters, using "yes and no" questions.

For example: "Do they have blonde hair"

This is similar to how a database will sort data, based on criteria that you choose.

Look at the aliens here.

Can you think about which criteria they all have in common?

How did I ask the database to group them?
