

Do animals and their offspring always look the same?

What is a frog's baby?

Word	Definition
adult	A fully grown animal or plant
baby	The child of an animal or
offspring	Another word for baby
Living	Pants or animals that move, grow, breathe, reproduce, and need food and water
dead	A plant or animals that was once living but isn't anymore

Key Knowledge and Concepts

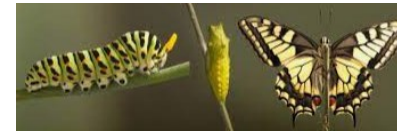

Adult animals reproduce and have offspring (babies)

Some offspring look exactly like their parents but smaller

Some offspring are very different

caterpillar and butterfly

Animals, trees, and humans are living because they need food and water to survive.

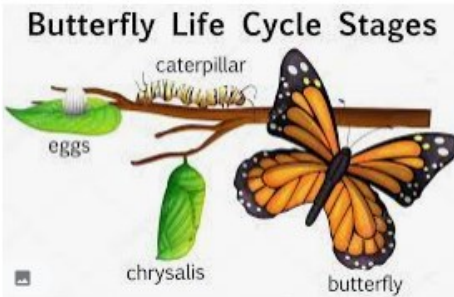

Living things move, grow and have babies.

When living things stop doing these they are dead.

Some things that are dead have been alive—like wood—it comes from a tree.

Some objects have never been alive—stone
